Not only the future of artists in the making, but also the afterlife of canonised figures is highly unpredictable. Who would have thought, for example, that Joseph Beuys would one day be haunted by the image of a young, six-foot-tall, Mary-faced Valkyrie? He and Olga Kocsi are companions in terms of their attraction to rabbits, though, while Joseph prefers the European hare (*Lepus europeus*), Olga feels closer to the domestic rabbit (*Oryctolagus cuniculus*). Presumably, there is no situation, no substrate, into which one has not already folded and applied this reticent, somewhat autistic companion. It is important to know this, because the images selected for this issue are almost rabbit-proof. There are, however, plastic airplanes, colourful clothes, barbies, New Palace, kitsch, white trash and Olga herself in all their quantities, exhausted performances, details of an increasingly self-propelled private mythology as the sole subject of a new link to Beuys, with whom, I should note, they are suspected to be unfamiliar... In any case, it is quite liberating to see the desaturated, glorified authority of the German master popping up in such a sauce, unassertive. When one can watch Olga Kocsi's work up close as a teacher, one cannot escape the thought that the orgy, as Jean Baudrillard called the self-destructive, magnificent frenzy of modern art, may not be over. continues, in its infantile way:

is called design, more specifically media design. Media design has no particular conscience, or shall we say, that's not its strong point. It's a bit like contemporary art that's had the oppressive idea of goodness and the aristocratic self-consciousness that goes with it taken out of it and nitro injected into its engine. If anyone, it is Olga Kocsi who belongs here: she is in a relationship with technology of all kinds, whether it is suitable or (still) unsuitable for creating images, like a kindergartener with plasticine, while this seemingly uncontrolled creativity, which fills the space precisely and in its spontaneity

is also combined with disciplined form. Of course, his work not only includes photography, but also live performance, dj and vj sets, video, new media installations and animated robots, corporate advertising and social ads, as well as pencil drawings, basket weaving and paper folding. At the same time, whether it be the most restrained practices, applied art assignments, or the most insane client expectations, all his work gravitates towards something close to the core of his personality, instinctively and inescapably autonomous, yet often with unexpected emotional force and immediacy. One example of the latter: for one of his end-of-year projects, he paraded a quasi-life-size picture of Mary, which belonged to their family and played an important role in the family's domestic mythology (which is also worth a mass), through the scenery of Újpalota, and photographed it in various situations. In one small action, she placed the image behind a peacefully sleeping homeless person, photographed them, printed the image, mounted it on cardboard, placed it next to the sleeper and moved away. The work is just two documentary photographs, but it condenses worlds. Let's not that Olga Kocsi's work was featured in the memorial issue of Lettre Attila Kotányi. We think that Kotányi would have loved this approach, which draws uninhibitedly on everything that contemporary pop culture or street culture throws up, while also bending everything to his own image (as we know, for example, that he got chills from Beuys, with whom he taught at the Düsseldorf Art Academy at the same time). In case we didn't tell you, Olga Kocsi is an MA student in Media Design at MOME; she is soon to become a media designer and as such, a grain of sand in the machine, or a poisoned scone, to use the anniversary Orkhon's phrase. We can only wish that his talent, which for the time being seems to be bursting the boundaries of his chosen profession, will find a secure place in the somewhat caste-ridden Hungarian art scene.

Short teaching exercise

Secondary School of Fine and Applied Arts

Autumn 2014

practical time: 48

hours of lessons held: 6

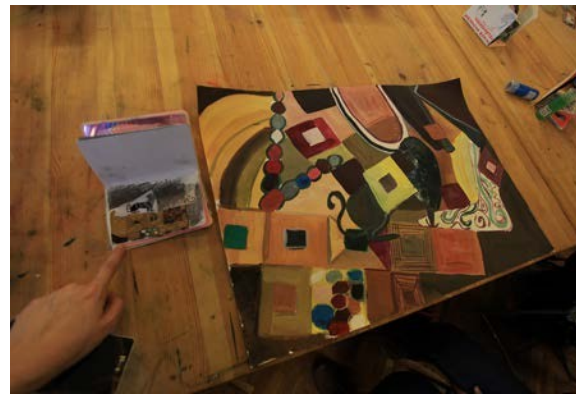

hours Lead teacher: István

Sinkó class: 9-10

szak: painter

My first teaching experience was at the School of Education. The vocational school prepares students for university admissions with art courses, and I completed an internship in the painting class. We tried to break the creative students of good ability out of their familiar scene by setting them tasks that would expose them to new materials and techniques. Together with Andrea Kozma, we spent our practice and together we invented the lessons that we in the 9th and 10th painting classes with slight differences in age differences.

The starting point was the same for both classes, but the tasks had a different outcome, and it was quite an interesting experience to watch the students and to see how big the difference is between 9th and 10th grade, even though they are included in the same class in the NAT.

Museum pedagogical practice

Museum of Contemporary Art

The Ludwig Museum, which understands museum education in a broad sense, welcomes not only children and student groups, but also adults and adult groups to its various activities. I came into closer contact with children during the weekend family day and integrated family activities! participated in the events not only as an observer but also as an active helper. The programs always followed a set schedule, starting in the activity room, after a little talk and tuning in, we went to the exhibition space where they got to know the guided artwork better and got into a playful relationship with the artwork. To close, we returned to the workshop, where they started to create to get closer to the theme.

Autumn 2014

practical time: 30 hours

lead teacher: Rita Dabi-Farkas

Long teaching practice

Mihály Fazekas Mihály Practising Primary and Secondary School in Budapest

Spring 2015

practical time: 120 hours of

lessons: 15 hours

lead teacher: Béla Garamvölgyi

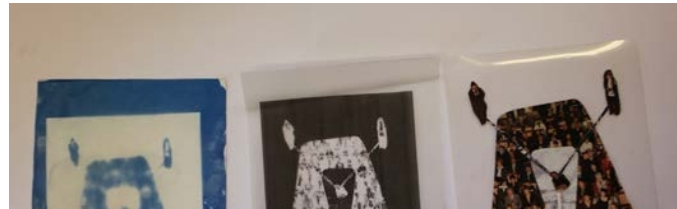

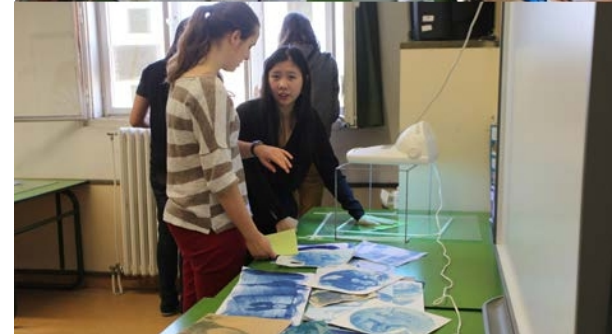

class: 12c

szak: Math

I did my teaching practice at the Fazekas Mihály Elementary School and High School in Budapest, one of the top schools in the country. It is filled with competitive, excellent, selected students. Here I had the opportunity to try out several classes and choose one where I did a coherent assignment. I chose the class before graduation myself, I wanted to work with them and develop their creativity, strengthen their visual thinking.

Development plan

Class 12c in mathematics in their final year of secondary school. They learn drawing one time a week. I created a theme of five lessons aimed at their creativity, visual expression and experimentation. The use of the medium during the exercises was specified in each case. As they are in high school, they have basic technical skills. Therefore, every lesson they had to create something interesting on a new surface. Drawing as a medium was relegated to the background, but at the same time, image-making skills and visuality played an important role. The lessons built on each other and developed.

Development Plan

The five interlinked lessons are connected by visual storytelling. In the first lesson, you had to tell a story of your own, but in just six words. The sentences were written in English and had to be at least six sentences of six words each, but each had to stand on its own. These sentences were also presented to each other, with everyone reading out what they had created.

Our visual source of inspiration were the photomontages of László Moholy-Nagy. I did not use the simple paper cut and paste technique, but asked the students to compose on a transparent surface. They arranged the cut-outs on A5 size laminating film. Close to this technique is Duchamp's Big Glass and the studies he made for it. By its very nature, the technique requires no manual dexterity, only composing skills and creativity.

From these montage images we made a cyanotype. The students were introduced to archaic photographic processes and had the opportunity to experiment with the technique (a contact process where a 1:1 print can be made from the image using sunlight or a UV lamp).

Moving on from these images is a preview composition, or shadow theatre. The inspiration for this was a performance by Negative Variety, based on the film project by László Moholy-Nagy entitled The Dynamics of the Big City. Here we had to work in groups, cooperation and instructing each other was important. The students had to use their bodies - as a visual element - complemented with different material elements. At least two groups - or maybe three - were divided. The projected image was documented, both with video and photos. Shadow brushes were used for further development. Simple graphic elements had to be added to the image, such as

geometric shapes, lines. You could use a ruler, a compass, but freehand drawing was also allowed.

The students were involved a group creative process, the mediums were knitted, but it up to them to decide what to upload. The storytelling was transposed into a visual form. Experimentation and experimentation with techniques was one of the main lines and the aim was to bring art closer. The tools were accompanied by art historical references, thus enriching their knowledge of 20th century artists.

Competences to develop:

Creativity

Abstraction

Individual work

Working in a group, communicating with each other, organising, making informed decisions

Cooperation-cooperation

Taking account of divergent views Openness

Analysis of works of art, typical means of expression of artists.

Experimentation with new materials and techniques.

Rewording of the task given.

Analyse and evaluate your own and others' work. Planning a problem-solving process.

Group profile:

The group has 26 members of which 9 girls 17 boys. Pre-matriculation maths class. Good ability, intelligent children. Not so strong visually as they get a one-sided load of realistic subjects. Knowledge of arts and contemporary art is patchy and not considered interesting. Some students have deeper knowledge which they can put to excellent use in the classroom. They are disciplined in class, no disorderly behaviour.

They engage in activities that develop their thinking and analytical skills. Their creativity is so boundless that they even use books to make montages.

I chose them to shadow because they are old enough that they don't need to be disciplined and can be worked with seriously. Their drawing class is the last one they will have before enrolment, they may never take part in visual education later. Since they are about to graduate, I have designed the assignments so that they only have to participate in class activities, no collection work or homework.

It is a diverse class, with some sensitive and some open. Meeting a student in the stairwell - where we exchanged a few words - I complimented him on how well he had done in class. He told me that his best drawing lesson so far was the montage, because he can't draw well.

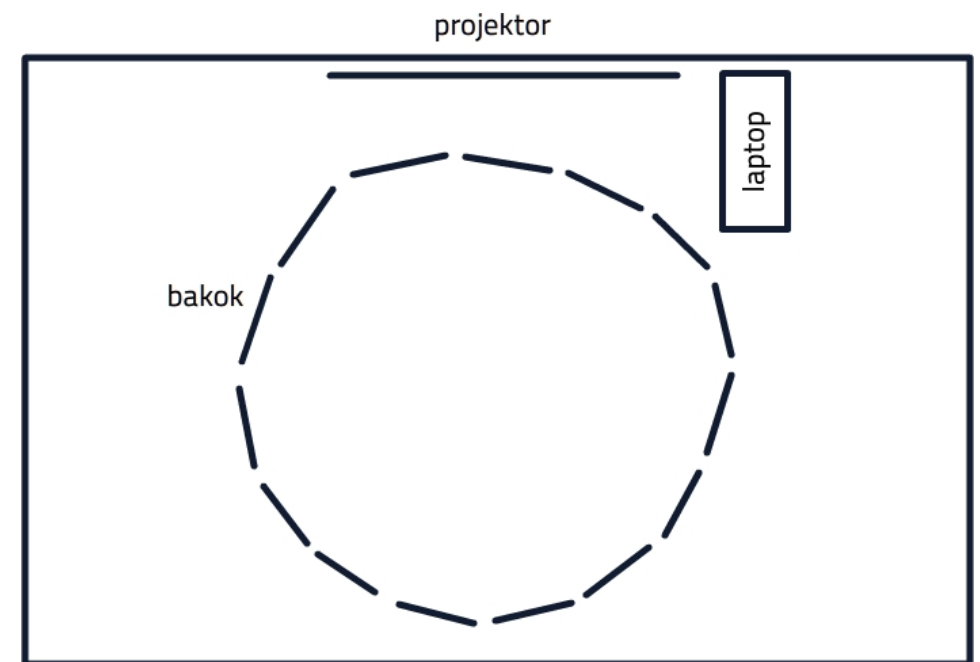

Some take the tasks seriously, try to work on them, and some students just want to get through it.

They are about to take their final exams, mostly in the real sciences, but some are studying engineering, medicine or philosophy. These are the last moments to get a little closer to visuality.

1. six words

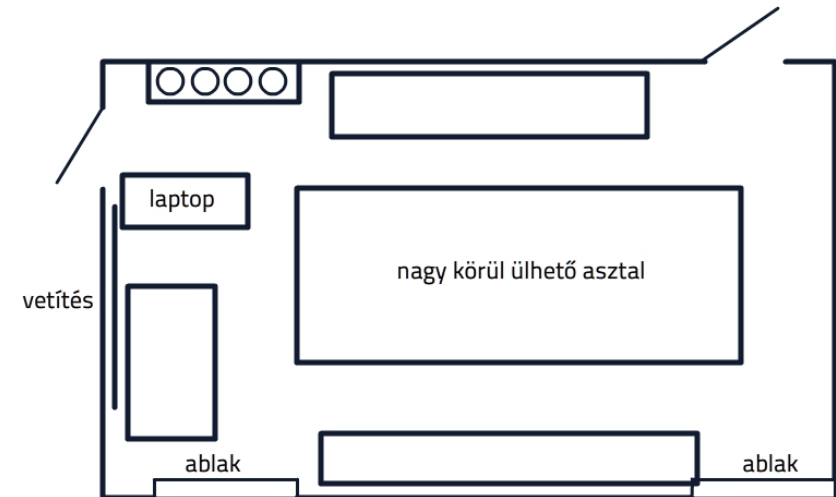

I started the lesson with a warm-up question: everyone should introduce themselves and tell me what they did in the nursery. We talked about the stories, where they are present and in what form. I gave a short presentation outlining what we would be doing for the next five lessons and then gave out the assignment. They had to write six-word stories in English, drawn from their own lives or from fictional stories. One or two students had difficulty with English, so they could do the task in English. Six word stories are anecdotally attributed to Hemingway. During a lunch reception, they competed to see who could write the shortest story. The famous writer created the first six words on a napkin: "*For sale: baby shoes, never worn.*" The six words go beyond themselves, they contain more story. Everyone had to create six six-word sentences. Some people managed much more than that, but there were others who couldn't do it at all and were feeling stressed. I asked everyone to read out their sentences. This made the students very embarrassed, it seemed to me that speaking to each other was much more difficult than if they had just read it to me. And there is no way around presenting to the community, it is important to build their confidence. I then cut up the sentences on the papers and had everyone draw from them. They then worked with each other's texts. As there was still time left, we started to make the montage. In the middle of the circle I spread a pile of postcards, from which they had to collect materials to visualise the sentence. They did not necessarily have to illustrate, but were free to associate, to think ahead, even to abstract and just refer to the starting point. A lot of times they just started looking at the newspapers, not really looking for pictures, so I broke them up into pages for next time. After creating and exchanging six-word sentences and then collecting material, I got to the visualisation.

2. montage

In the second lesson, I again adapted the room layout to the task, by making a huge table of benches - to sit around - on which I spread the piles of photographs and magazines. Again we started with a presentation, the art link to the montage images were Moholy-Nagy's photomontages and the technique was matched by Duchamp's Big Glass, so we looked at these for inspiration. It was hard to get their interest and the information I gave them about the artists didn't really come across," I later found out.

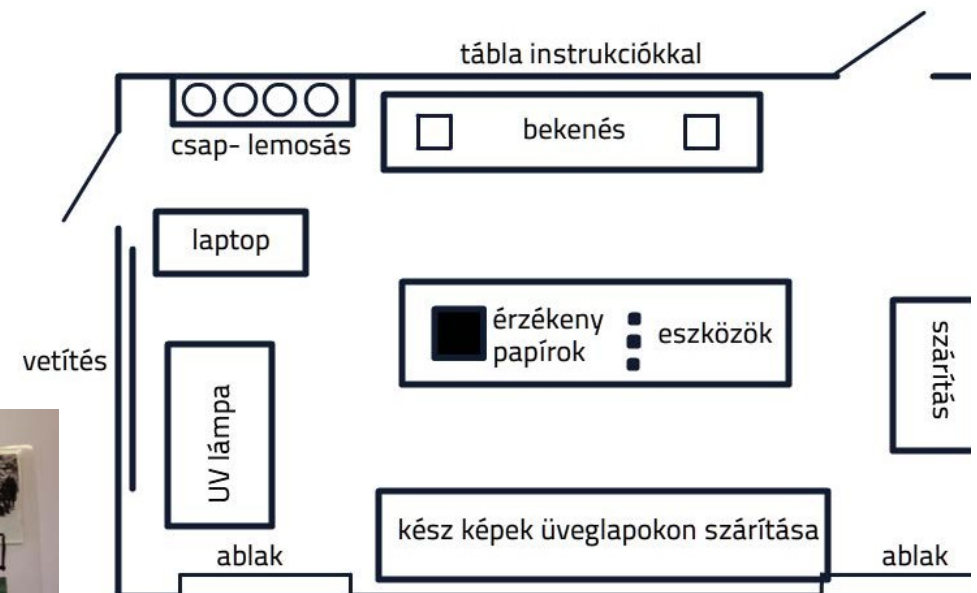

Graphic elements could be incorporated into the compositions made between the laminating film using alcohol markers. Not many people used this, partly because of my difficulty in communicating with the class and partly because of my inexperience. I could talk to the group as long as the presentation was at the beginning of the class. Once they started working, I had difficulty getting their attention again. The large group size was a problem for me to keep track of everyone. When the montage started, it a bit chaotic, but everyone got to work. I consulted with the students one by one during the lesson, I didn't really manage to close the lesson at the bell, people just evaporated. The finished work didn't really reflect what we had looked at for inspiration. Some people didn't understand the montage or the composition of the images either, they just juxtaposed things. There were very nice results, some who liked the task and even made some extra work.

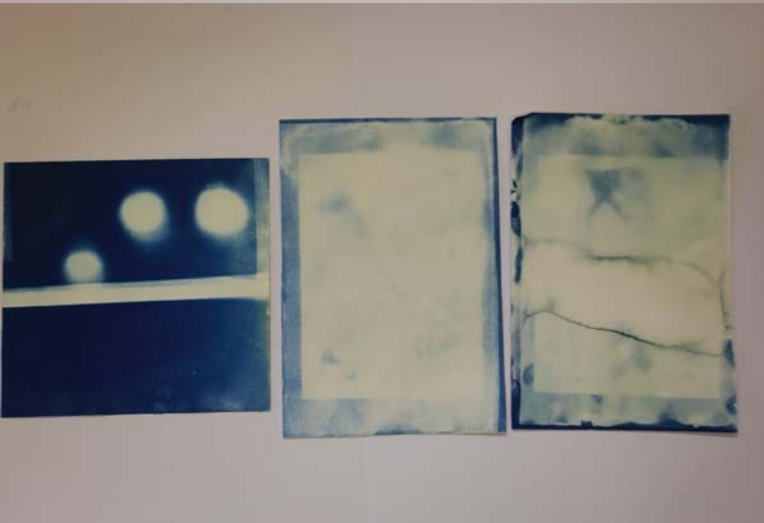

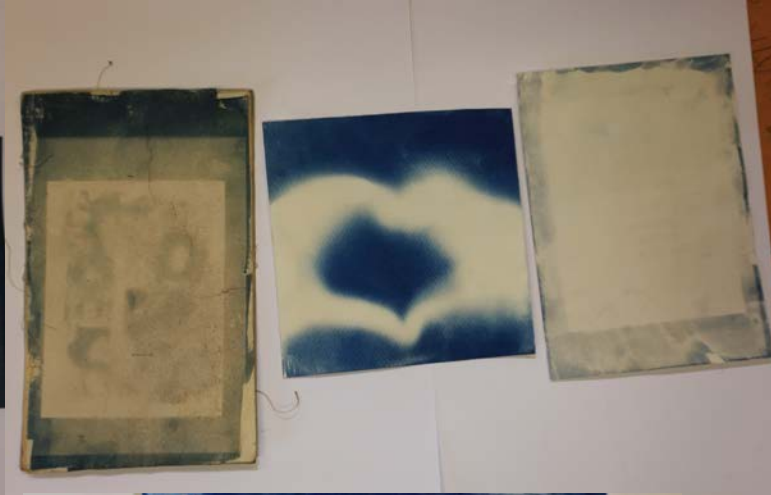

3. cyanotype

The third hour was spent making cyanotypes (originally planned to be the last one, I changed it). I made negatives from montages, which we turned into blue prints. We started the class with an evaluation, going over the previous class's work. I tried to involve them in the analysis of the pictures, but it was difficult to speak and express opinions in front of the community (I have attached the outline of the lesson). We evoked artistic aspects in the outline of the exercise. I have brought out the photograms of László Moholy-Nagy, which we had already discussed in previous lessons. When it was their turn to report on what they had heard so far, they could not recall much, Duchamp only remembered as "uncle in glass". After the short introduction - in which I tried to get you interested in cyanotypes - I moved on to the technique. We went through the steps in detail and the room was set up accordingly.

The space was adapted to the steps the students had to perform and took into account the source of the light and the position of the windows. After the presentation, the workflow started. While exposing the windows, they designed a self-portrait that could be interpreted as a personal impression (face, body print, handprint, etc.). Few people carried this out, I myself was very embarrassed by the speech to the group and perhaps I should have given more instructions for this part of the task. Many people just talked and did not start composing another image while their cyanotype was being made. I consulted individually with each student about their work, while not paying enough attention to the group.

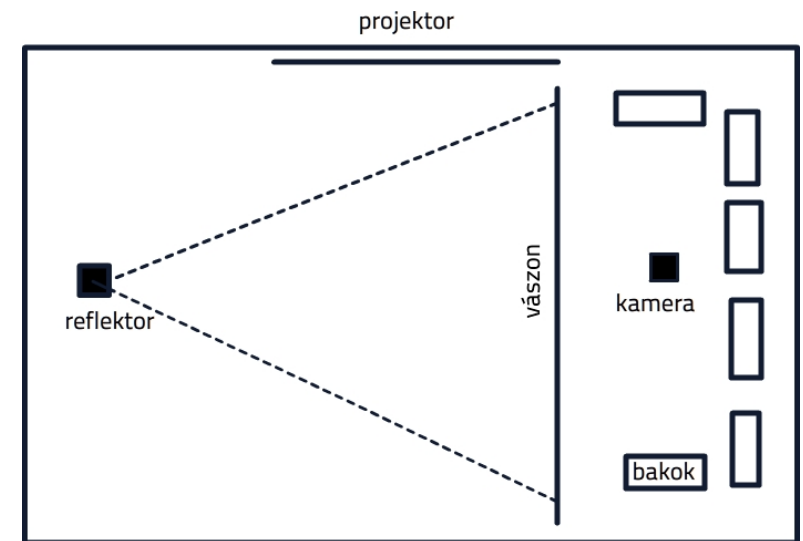

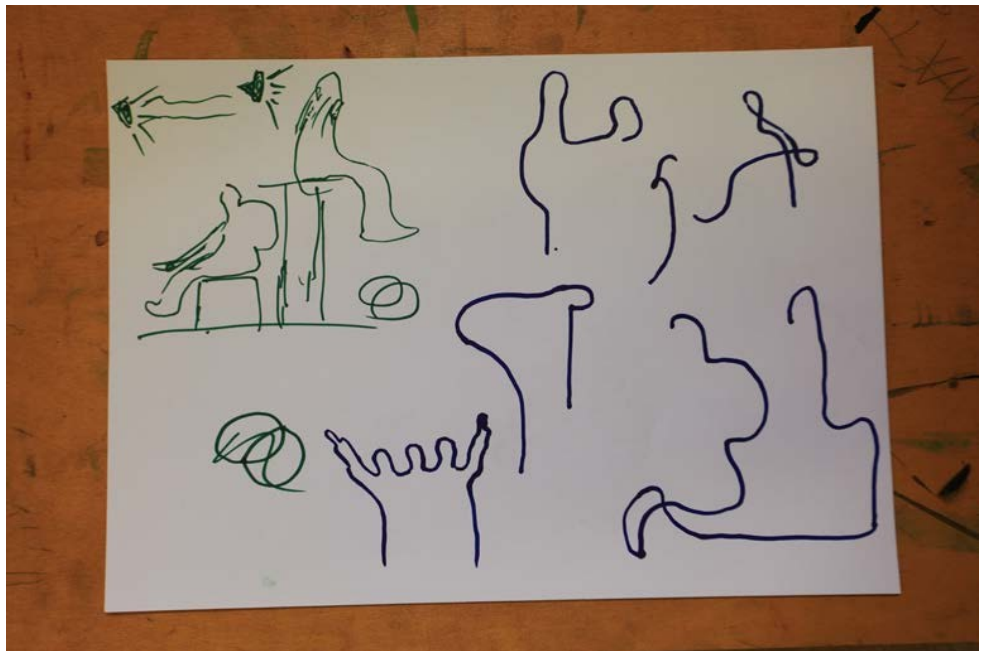

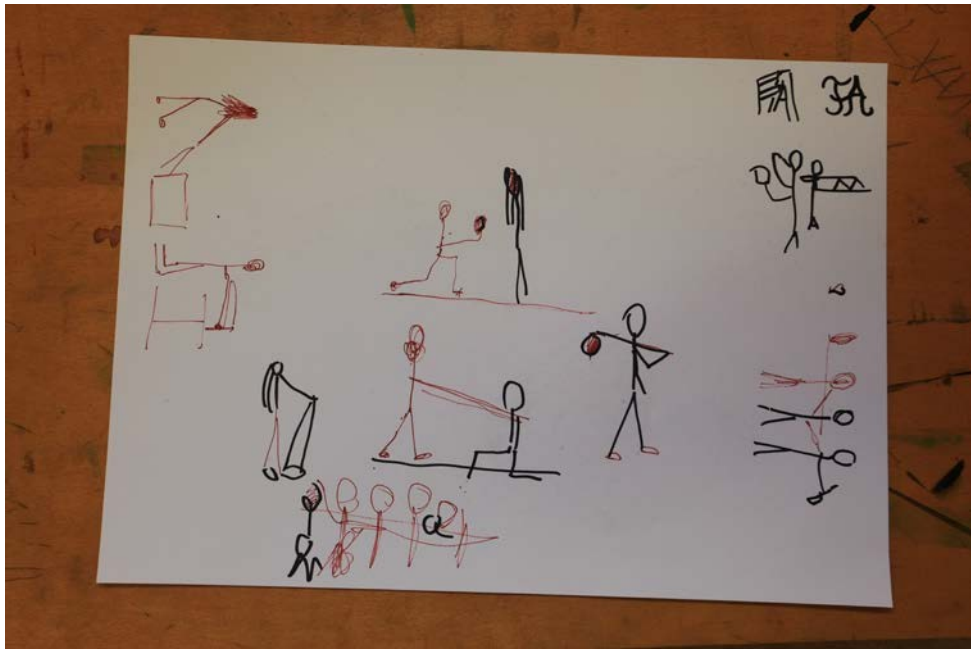

4. Shadow (successful watch)

In the fourth lesson I prepared the shadow play for the students. They had to create a vivid visual and work in groups. The layout of the room followed this, with a white screen across the room and a camera in front of it to record the action.

We were in the larger studio-like room, so there was for everyone. In one half of the space were people and a couple of geometric bodies - which they had to compose with - and in the other half they had to work together on set up trestles, two by two, to draw a line on a piece of paper. At the beginning of the lesson, I divided the group up using a game I had taught in drama pedagogy, where they had to line up according to who was born in which month. They did the task twice in 12 minutes. For some reason I forgot to give them a presentation at the beginning of the lesson, I just told them orally what the task would be. Originally, the Negative Variety team had done a shadow play on Moholy-Nagy's *The Dynamics of the Big City* - I wanted to show them this. From this, their task was to create compositions inspired by the cyanotypes, which the other half of the team could draw. Music played in the background, helping them to relax. The students worked well, although at first they were a little apprehensive about moving and performing in front of each other. Perhaps the curtain improved things a little, as everyone appeared as a shadow image. Drawing the compositions was a problem as they did not hold the pictures long enough. Even in the pair work - two people drawing on the same page - everyone stayed on their own side, few dared to move to the other side of the page. They drew with different coloured felt-tip pens, so you could see where they had drawn. The quick drawings mostly showed stick figures, but the compositions were recognisable. The class ended early as the presentation was missed. I didn't really manage to close this one properly either.

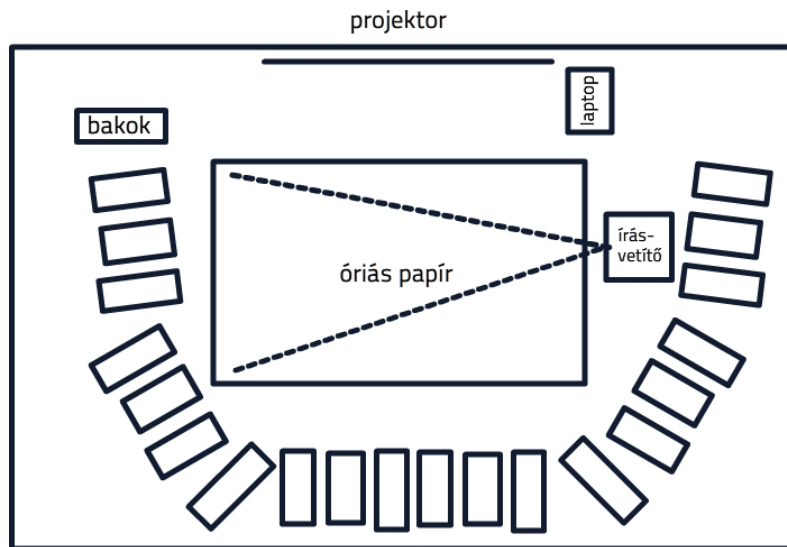

5. large drawing.

In the fifth lesson, we reviewed the lessons so far and watched the video of the shadow play that was recorded and edited. I asked them to write a story based on what they had seen. What do they see in the finished film? They were free to make associations, to abstract a little from the film. Then everyone had to read out what they had written. You could write a word or a sentence, a poem, a haiku - anything, without any genre restrictions. Some filled the page, others had difficulty writing down even one word. The layout of the room was adapted to the class:

The chairs were arranged in a circle, and in the middle of the room was a 3x5 metre piece of paper. The next task was to create a picture together on the large paper based on what had been said. They were given paints and ink. Despite the teamwork, they did not really collaborate, everyone started to draw on their own on a part of the paper. I had an overhead projector at one end of the paper so that shadows could be drawn around it. Some people put a laminated montage from the previous lesson on the projector and started drawing around it, or they threw a transparent ruler

on. For a long time the middle of the paper was left blank, they didn't dare to go into the centre. Finally, an intrepid-looking boy with glasses broke the void and began to create inside, stepping on the paper. The result was a mess, but it was interesting to watch the students. Some started dripping paint on their own - like Pollock - when asked, it turned out they didn't know the artist at all. It was exciting to see them working together, but they didn't really get it together. It was all a kind of pleasure painting, not really keeping to the initial concept. There were some interesting details, but as a picture it just didn't work. The task edition was perhaps not so clear to them either, but maybe I hadn't thought it all out well in the first place.

6. Kassák sketchbook

In the Small School, we planned and held a 6-hour-long class with Andrea Kozma. The starting point was a poem by Lajos Kassák. We tailored the whole recollection especially for this occasion, the choice of the poem was 12 lines, adapted to the size of the class.

Lajos Kassák's poem, *The Confusion of the Night*, is broken down into lines and placed at the front of sketchbooks. The number of students in the class (12) is the number of sketchbooks, and the length of the poem was chosen on this basis. The sketchbooks were not made by the students, they were made for them beforehand. Everyone was given a notebook with the text on it, and had to make a quick visual reflection on paper. The notebooks had pages of different colours, materials and sizes. 12 students exchanged the notebooks every 10 minutes, each drawing in each notebook, always reflecting on the previous drawing.

THE CONFUSION OF THE NIGHT

The bell rang.
There was a horse behind the door
I greeted him with a deep bow
and he saluted with his right
foot.
A silver boat rocked me on. I must
have been far from home when I
woke up at dawn.
On what ground have I landed, I
asked dumbly.
What kind of people live here
emptied my milk glass
they nailed my bread to the table with iron hooks.

Each person was given one of the drawing booklets, from which they had to choose a drawing, preferably not their own, and

enlarge to A2 size or add, think further and together the 12 pages (say 3x4) had to display the title of the poem. They then had to decide with each other what form they would and how they would solve the editing. Everyone had to work individually on the big picture which had to work in groups and the text had to be readable.

By the end of the sketchbook lessons, it had become a fool's errand, with the montage and collage materials given to the students being used to tease each other rather than follow the task. Not everyone worked at the right pace when it came to the big picture, but there were some nice results, and you could roughly read the caption.

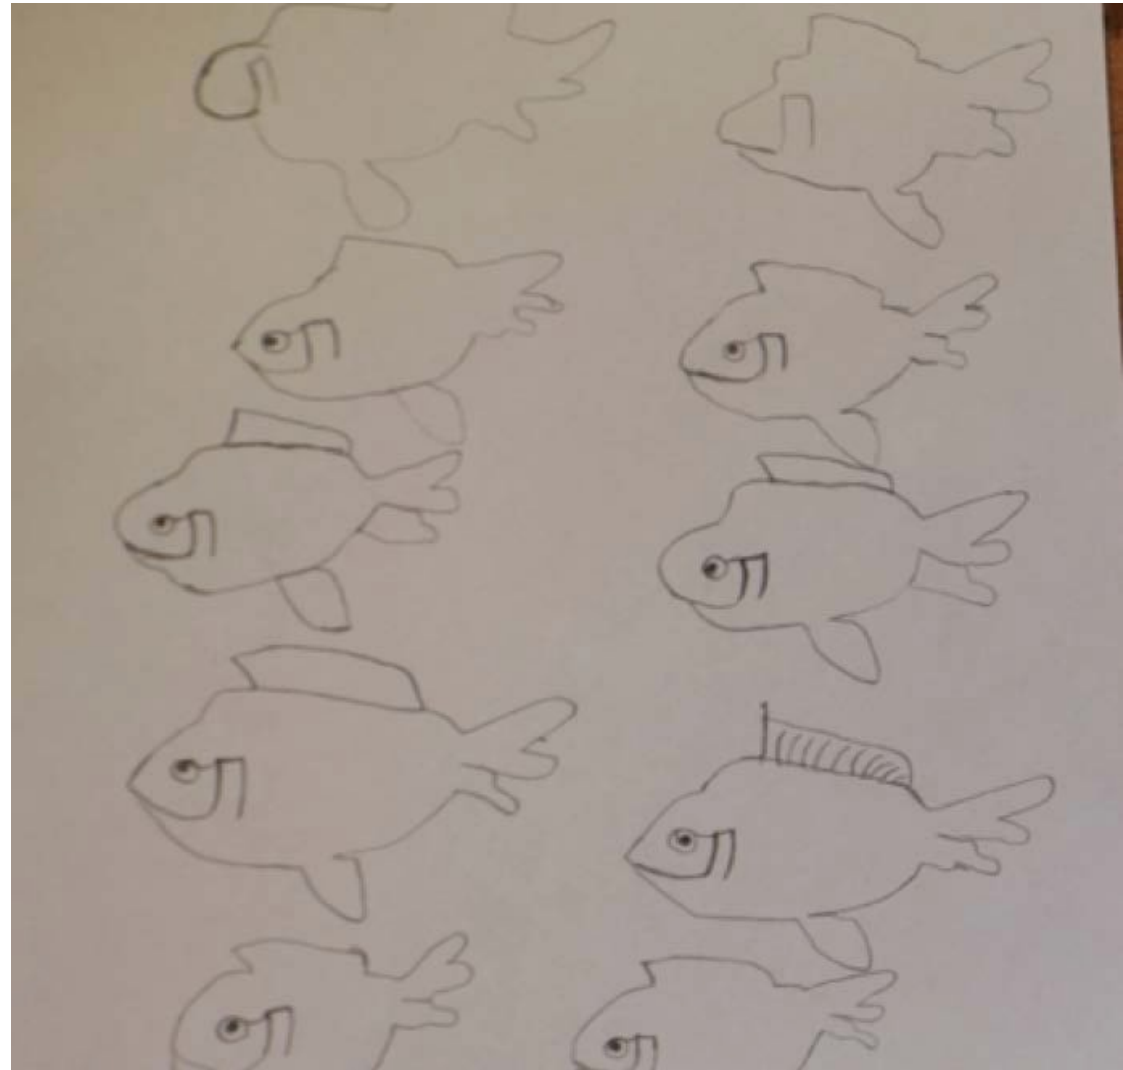

Failed clock

I tried to teach a class in maths 11c at Fazeksa. It was the fourth class I had ever taught. was very bad, I felt bad. In the class the students were stimulated with a line drawing, Picasso was an art parallel. Everyone was given a picture of an animal to draw a line drawing based on. At least 10 of them. In the beginning I could call their parents after they were working and I couldn't talk to the group. A line drawing was the purpose of the lesson, to teach students how to reduce a sight after simply sketching it from a hinge. The drawings were very well done, but the students quickly got bored with the whole thing, I couldn't do anything about the situation. One student was very resistant and refused to start, saying there was no point. Maybe I should have thought in advance when giving out the assignment, what would happen when they were ready, where to go next, how they could use the knowledge immediately.

- To inspire them, the presentation was fine, the idea was to take it further, playfully or to get everyone to use their skills, and say draw a fake picture and like an Activity board you have to start drawing big and your group can guess, maybe light drawing, or you could experiment with string or use it as a precursor to something. They could have experimented with different materials, perhaps using a thick brush with a marker pen on a large metre by metre and a half of packing material, if they were good at drawing on small paper. Although anyone who takes the whole thing as an attack and doubts the point of the whole drawing class, I don't know what can be done to get his interest. Is there anything that reaches such students. It was not possible to finish the lesson on its own. We got into the assessment and the children were dismissed. I had a hard time communicating information to the group, I could communicate with one student at a time.

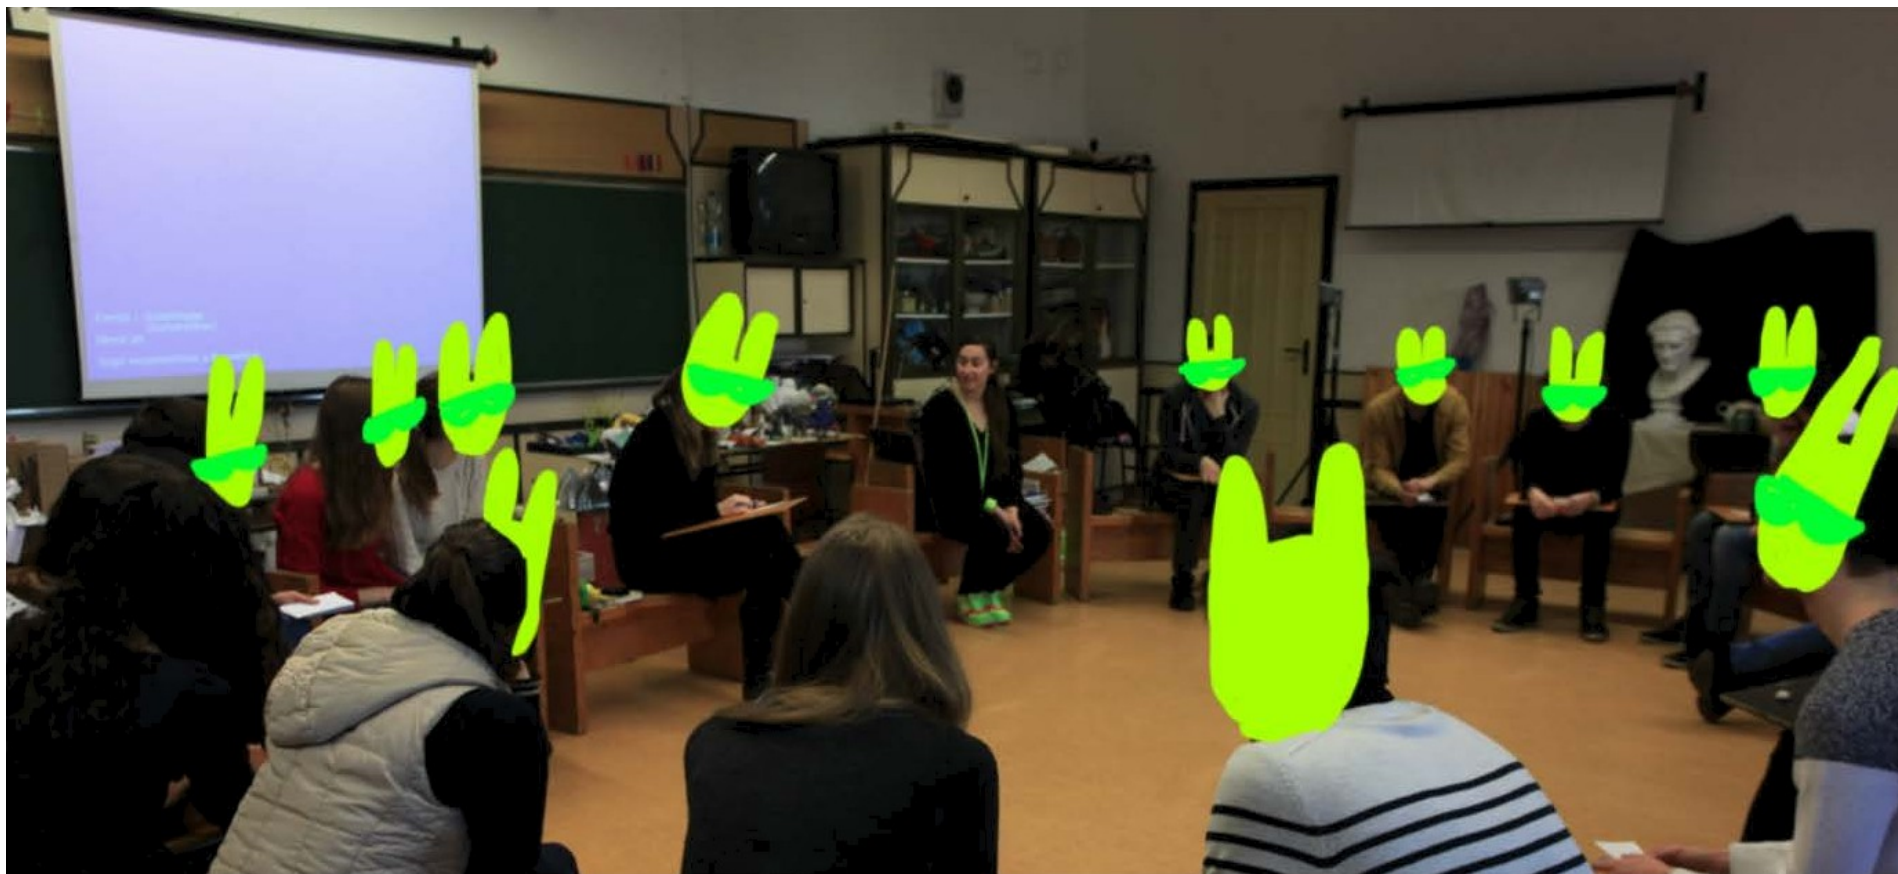

This student worked very well, he did a great job, I think the fish screened well, they are recognizable. You can see the way he was progressing and he was getting more and more confident in his linework.

I was able to communicate with this girl, and offered her to try out two felt pens at the same time, using several colours. I liked the end result, I brought them 3D glasses, the effect of the vibrant colours is really nice. It would have been nice if the other members of the group had tried this technique, but unfortunately I couldn't get through to them.

This was the boy who refused to work. First he drew a piece in the left corner, when I went up to him and asked him why he wasn't working, he told me it didn't make sense. I tried to explain to him that the reduction of drawing the animal with one line gives a different look, that it is so easy to draw it in a simplified way. When he still refused to work, I offered him to bring an art book and read a passage from it and I would question him at the end of the lesson. Then he started working, but just scribbled the rest. I asked him how he evaluated his own work. I told him if he works that fast, he shouldn't stop at 10pcs, he should do 120pcs. He was a bit surprised. He started to argue that there was no point in having a drawing lesson, so I took the book to him and put it down in front of him, telling him what to read.
